The Highest Principle is that which appears to be unattainable most of the time but manifests as we embark on the journey and walk in the way. The synthesis of the spiritual and physical understanding of our purpose, individually and collectively, is the most challenging aspect of this path. I have found this to be true in all cases, religious or spiritual paths, and uniting the Highest Principle with our carnal avatar in the flesh is often met with overwhelming aversity and opposition. The more we try the more difficult it becomes, which only makes the reward that much worthwhile. As CG Jung has been quoted in saying, “No tree, it is said, can grow to heaven unless its roots reach down to hell.”<sup>1</sup> This statement resonates with most scriptural findings I have come across from multiple belief systems. We must climb the ladder to reach the top and there are no short cuts when it comes to the Absolute.

Without getting too far into quantum physics and its principles, I would like to acknowledge some of the findings and contemporary statements of scientists working and studying that field. The very acknowledgement of the existence of such a field is revolutionary and the implications are vast when briefly understood. I could not help but think that the concept of *Keter* in the Qabalah and the link between quantum mechanics and spirituality are direct and intentional by a grand design. A place where space and time fail to regulate existence and every probability coexists, this is the quantum field and the realm of potentiality. An article published by Scientific American states the following:

---

<sup>1</sup> **Carl Jung** (born July 26, 1875, Kesswil, Switzerland—died June 6, 1961, Küsnacht) was a Swiss psychologist and psychiatrist who founded [analytic psychology](#), in some aspects a response to [Sigmund Freud's psychoanalysis](#). Jung proposed and developed the concepts of the extraverted and the introverted [personality](#), [archetypes](#), and the [collective unconscious](#). His work has been influential in [psychiatry](#) and in the study of [religion](#), [literature](#), and related fields( Fordham, M. S.M. and Fordham, . Frieda (2024, July 22).

“Until the past decade, experimentalists had not confirmed that quantum behavior persists on a macroscopic scale. Today, however, they routinely do. These effects are more pervasive than anyone ever suspected. They may operate in the cells of our body.” (Vedral, 2011, para. 2)

I do not merely mention the quantum world to elaborate some form of alchemical understanding. I mention this because if quantum entanglement is real, an accepted concept that can be quantified (as the debate continues, many have been swayed towards accepting this), then our connection to our Creator will always exist. The discussion on our biological origins and the existence of a soul is something else scientist must struggle with, but an entanglement with the Divine presents a great possibility where these beliefs could meet. As stated in the Scientific American article (Vedral, 2011), “The quintessential quantum effect is entanglement, a term that Schrödinger coined in the same 1935 paper that introduced his cat to the world. Entanglement binds together individual particles into an indivisible whole.” (para. 4). The concept of indivisibility implicates the possibility of a Creator always being linked to the creation. Carlo Rovelli (b. 1956), an Italian theoretical physicist and writer, is actively engaged with some fascinating theories and experimentation. His work in Loop Quantum Gravity has the potential of providing some fascinating and enlightening insight into quantum behavior and its mysteries.

The philosophical method of analysis of our purpose in life is something that is more difficult to quantify and measure. This form of exploration is one that is more idiosyncratic and unique to the individual. Whatever one believes and however they get there, some fundamental truths should be acknowledged along the way. Whoever or whatever created us, as in everything and anything we could see, hear, and measure, that Creator is still connected to us. Through that

connection, we are all connected. Belief in the unseen is not required for it to exist. Adherence to something greater and beyond our understanding is the humility that can conquer our hubris. As the macroscopic understanding of quantum physics is unveiled, we will further be able to understand that connection with the microcosmic. The more these mysteries are revealed, the closer we shall come to understanding our place in the universe and our connection to one another and everything as a whole.
